April 15th, 2024

Chart 1: Bar Chart

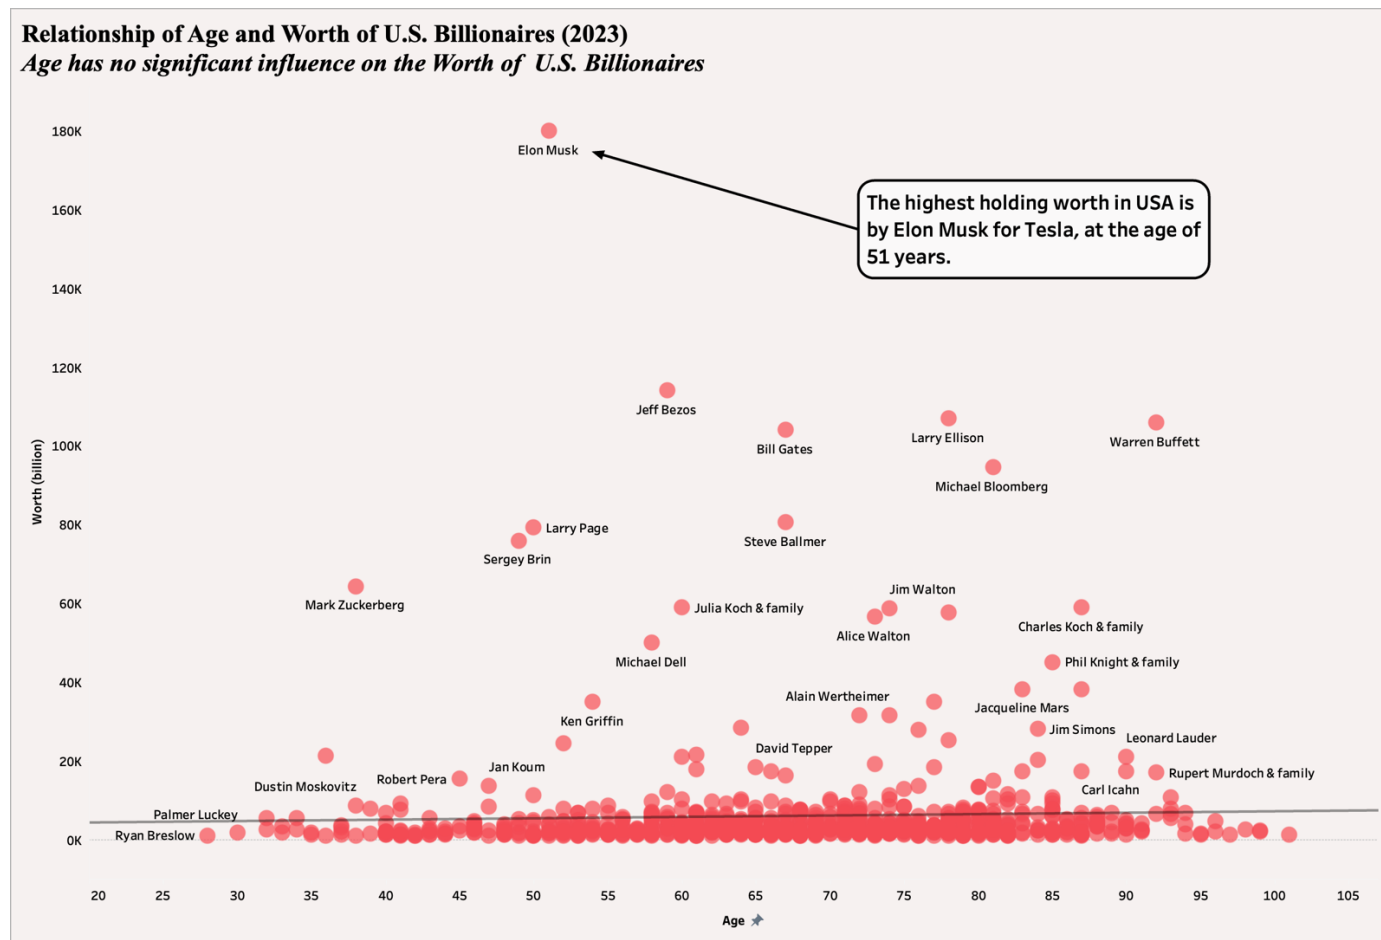

- 1) The bar chart indicates a significant gender disparity among global billionaires across industries, having male billionaires being predominant.
- 2) Telecom industry shows all-male billionaires across countries when considering the CPI economic indicator.
- 3) Finance, Manufacturing, and Technology are top 3 industries that are considered as the leading sectors with the highest number of billionaires across countries.
- 4) The industries with higher billionaire counts indicate not just the count but also give an aerial view of potential for growth and investment.
- 5) The use of parameter (Economic Indicator) gives user to explore how various economic factors like GDP, CPI or Total Tax Rate of respective countries affect the distribution of billionaire wealth across various industries with reference to Global Billionaires Statistics, 2023.

Chart 2: Histogram Chart

- 1) The age bin 60-70 years indicates the peak of wealth distribution, suggesting that this age group has the highest collective net worth among the U.S. billionaires list.
- 2) It is notable that the Billionaires in U.S.A. having age groups between 60 to 90 years achieve their maximum wealth in Finance and Investment industry.
- 3) There is one oldest billionaire in U.S.A. falling around 100 years age bin having wealth from Finance and Investment industry of \$1.3 million and one youngest billionaire in U.S.A. falling around 20 years age bin having wealth from Technology industry of \$1.1 million.
- 4) The distribution shows slightly left skewed, indicating that there are few U.S.A. Billionaires between 20-50 years age group having their wealth distribution in fewer industries when compared to those of U.S.A. Billionaires having wealth distribution in industries who are above 60 years age bin.
- 5) The parameter used includes variables of Life Expectancy Country, CPI Change Country, and Tax Revenue Country which make the visual more interactive to the user to compare how these effects the billionaires worth among industries within U.S.A.

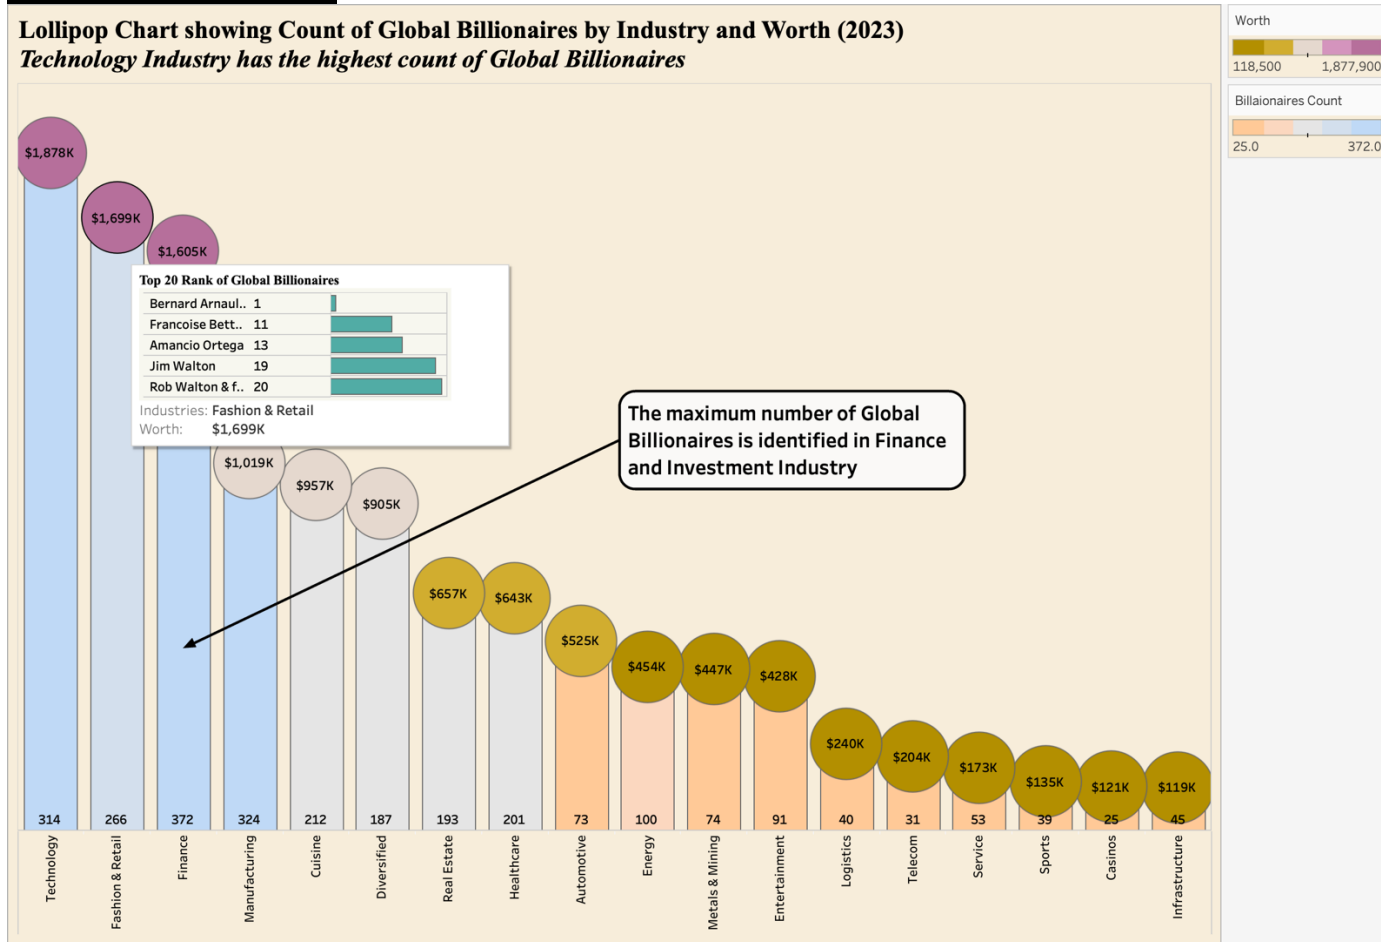

Chart 3: Scatterplot

1. The plot suggests there is no clear pattern or strong correlation between U.S. billionaires age and net worth, as the low R-squared value of approximately 0.0014, indicates that age explains a very small fraction of the variation in net worth.
2. The regression line has a slight positive slope with an equation of $\text{Worth} = 35.474 \times \text{Age} + 3681.25$ indicates that there is a minimal positive trend where worth increases with age, however it's not statistically significant, as the p-value is 0.3125 which is greater than 0.05.
3. The outlier, indicating an individual, Elon Musk, who has the highest net worth at the age of 51, which suggests that there are factors other than age which may be more significant in determining net worth. (The trend line and the annotation give greater insights for the analysis)
4. The scatterplot is dense at the lower end of the net worth scale, showing that most billionaires have a net worth closer to the mean, with fewer individuals having high net worth.
5. There is a noticeable cluster of billionaires between the age group of 50 to 70 years, which suggest that this age range is a common period for reaching peak wealth among U.S. billionaires.

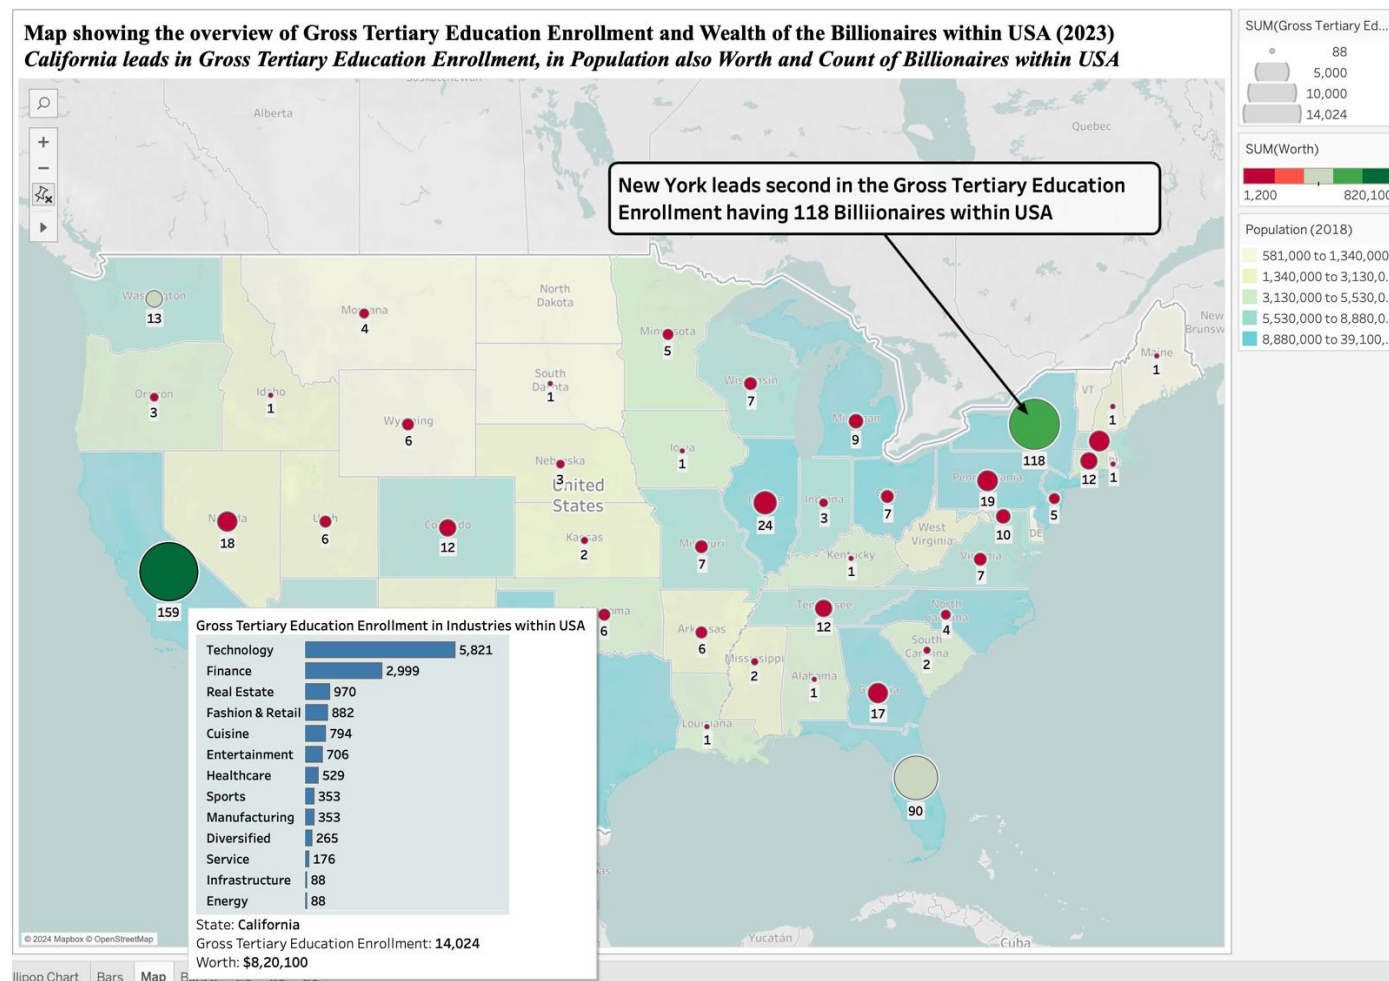

Chart 4: Lollipop Chart

Lollipop Chart showing Count of Global Billionaires by Industry and Worth (2023)
Technology Industry has the highest count of Global Billionaires

1. The Finance and Investment industry has the highest count of global billionaires, surpassing other industries with a significant lead for 2023.
